

To run in the VS code, you must do following steps:

Choose "Python", Python File

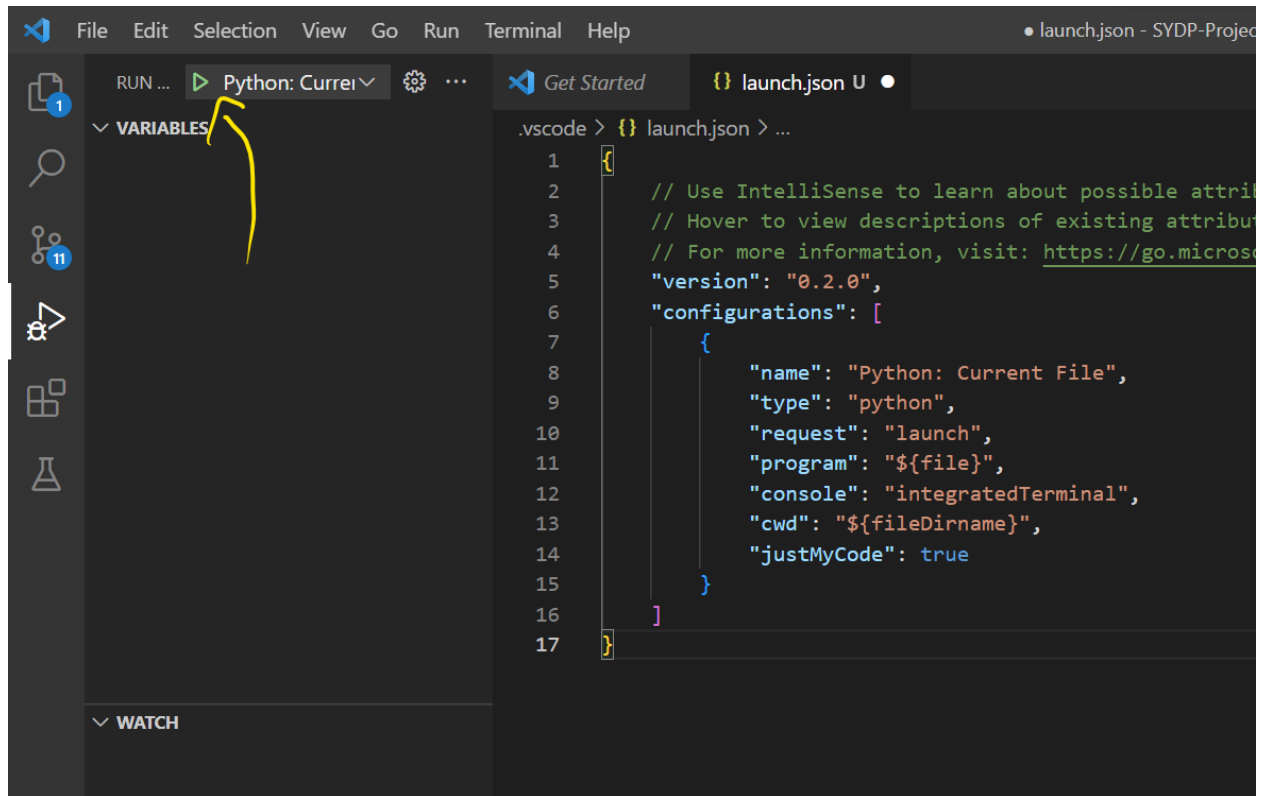

Add the line: (Ultimate Important!)

"cwd": "\${fileDirname}"

To the launch.json file,
Make it looks like this:

```
.vscode > {} launch.json > ...
1  {}
2  // Use IntelliSense to learn about possible attributes.
3  // Hover to view descriptions of existing attributes.
4  // For more information, visit: https://go.microsoft.com/fwlink/?linkid=830387
5  "version": "0.2.0",
6  "configurations": [
7    {
8      "name": "Python: Current File",
9      "type": "python",
10     "request": "launch",
11     "program": "${file}",
12     "console": "integratedTerminal",
13     "cwd": "${fileDirname}",
14     "justMyCode": true
15   }
16 ]
17 }
```

Then run it in

Reason:

The vscode default launch setting is “Absolute address” meaning it can’t read any relative address in the code. Thus, you must manually config it.

Or

Use pycharm or atom, which can perfectly run it at all.
